

Increase your software expertise with technical integration training and certification

Did you know that most industry analysts have ranked HP as the sixth largest software company worldwide? That's pretty impressive, placing HP in the company of industry titans like Microsoft, Oracle and SAP. HP continues to move up the ladder as we offer more leading software solutions to run, manage, optimise and secure customers' data centres and enterprise applications.

You have the opportunity to grow with HP by validating your technical expertise on various HP software products. The HP Certified Professional Programme is pleased to announce the worldwide availability of three new software certifications:

- AIS – Infrastructure Monitoring using HP SiteScope v9
- AIS – Application Security using HP WebInspect v7
- AIS – HP Asset Manager Software Implementation v5.10

All three certifications are aimed at professionals with technical integration expertise. You will be well prepared to help your customers configure, deploy and use these critical software products by taking the recommended training and attaining certification.

About the AIS – Infrastructure Monitoring using HP SiteScope v9 certification

HP SiteScope v9 allows a customer to use one tool to manage both physical and virtual servers. Network World calls this "a feature that should be considered mandatory by enterprise IT managers." Training and certification from HP will help you help your customers implement this critical tool.

You can earn the certification by taking and passing the core exam HP0-M26, Monitoring using SiteScope. One [comprehensive 4-day instructor-led course](#) is available to provide the technical knowledge and skills needed to manage and monitor an IT infrastructure using HP SiteScope.

About the AIS – Application Security using HP WebInspect v7 certification

You will give your customers peace of mind when you use HP WebInspect to conduct an application security assessment. WebInspect helps you identify known and unknown vulnerabilities within the Web application layer and validate that the Web server is configured properly.

There is one core requirement to attaining this certification – the exam HP0-M25, Assessing Web Application Security. A [3-day instructor-led course](#) helps you understand application security and teaches how to effectively perform web application assessments using WebInspect and the WebInspect toolkit.

About the AIS – HP Asset Manager Software Implementation v5.10 certification

Gartner analysts say that IT asset management tools are showing strong market growth and are on the cusp of mainstream adoption. HP Asset Manager – one of only two solutions rated a “strong positive” by Gartner – is well positioned for growth in this market space and you can be positioned as a trusted advisor in helping your customers implement HP Asset Manager v5.10 software.

This certification has one core requirement - exam HP0-M28, Implementing Asset Manager Software. The 5-day instructor-led training course [HP Asset Manager 5.1 Software: Essentials](#) provides the important skills and knowledge needed to configure, deploy and use HP Asset Manager 5.1 to successfully implement an asset management solution in an enterprise-level business or large organisation.

AIS – HP Asset Manager Software Implementation v5.10 replaces the previous certification AIS – HP Asset Management Software v5, which will be discontinued as of 1st July 2009. If you are working toward acquiring the old certification, you should complete your requirements prior to the discontinuation date.
