

HP ASE - Application Lifecycle Management Implementations v11

This certification verifies that you can manage activities associated with the core application lifecycle, from requirements through development, testing, defect management, and readiness for delivery. It validates that you can help customers plan and track projects and releases, use requirements to align business with IT, integrate with development for complete traceability, and unify functional, performance, and security quality management processes. Using Quality Center software, you are able to implement a unified platform for managing and automating the delivery of secure, reliable, and traceable applications.

Why earn this certification?

- To learn how to manage quality information throughout the development cycle, from constructing requirements and designing and executing tests, through monitoring defects.
- To validate your ability to demonstrate, deploy, and manage the ALM platform to support application quality assurance and management.
- To prepare you to help customers plan and track projects and releases.
- To unify functional, performance, and security quality management processes.
- To help your organization manage the application lifecycle from requirements through readiness.

Candidate

Typical candidates for this certification have at least six months of field experience with Application Lifecycle Management or Quality Center or have taken the recommended training courses.

Skill level

Expert
